# Background Information

QZSS EWS message is broadcasted using QZSS L1S signal structure that uses signal structure similar to SBAS signal. EWS also requires knowledge about Navigation Message structure. So, some background information on SBAS signals, GPS and SBAS navigation messages are provided.

# GNSS

Global Navigation Satellite System (GNSS) is the standard generic term for all navigation satellites systems like GPS, GLONASS, GALILEO, BeiDou, QZSS, NAVIC.

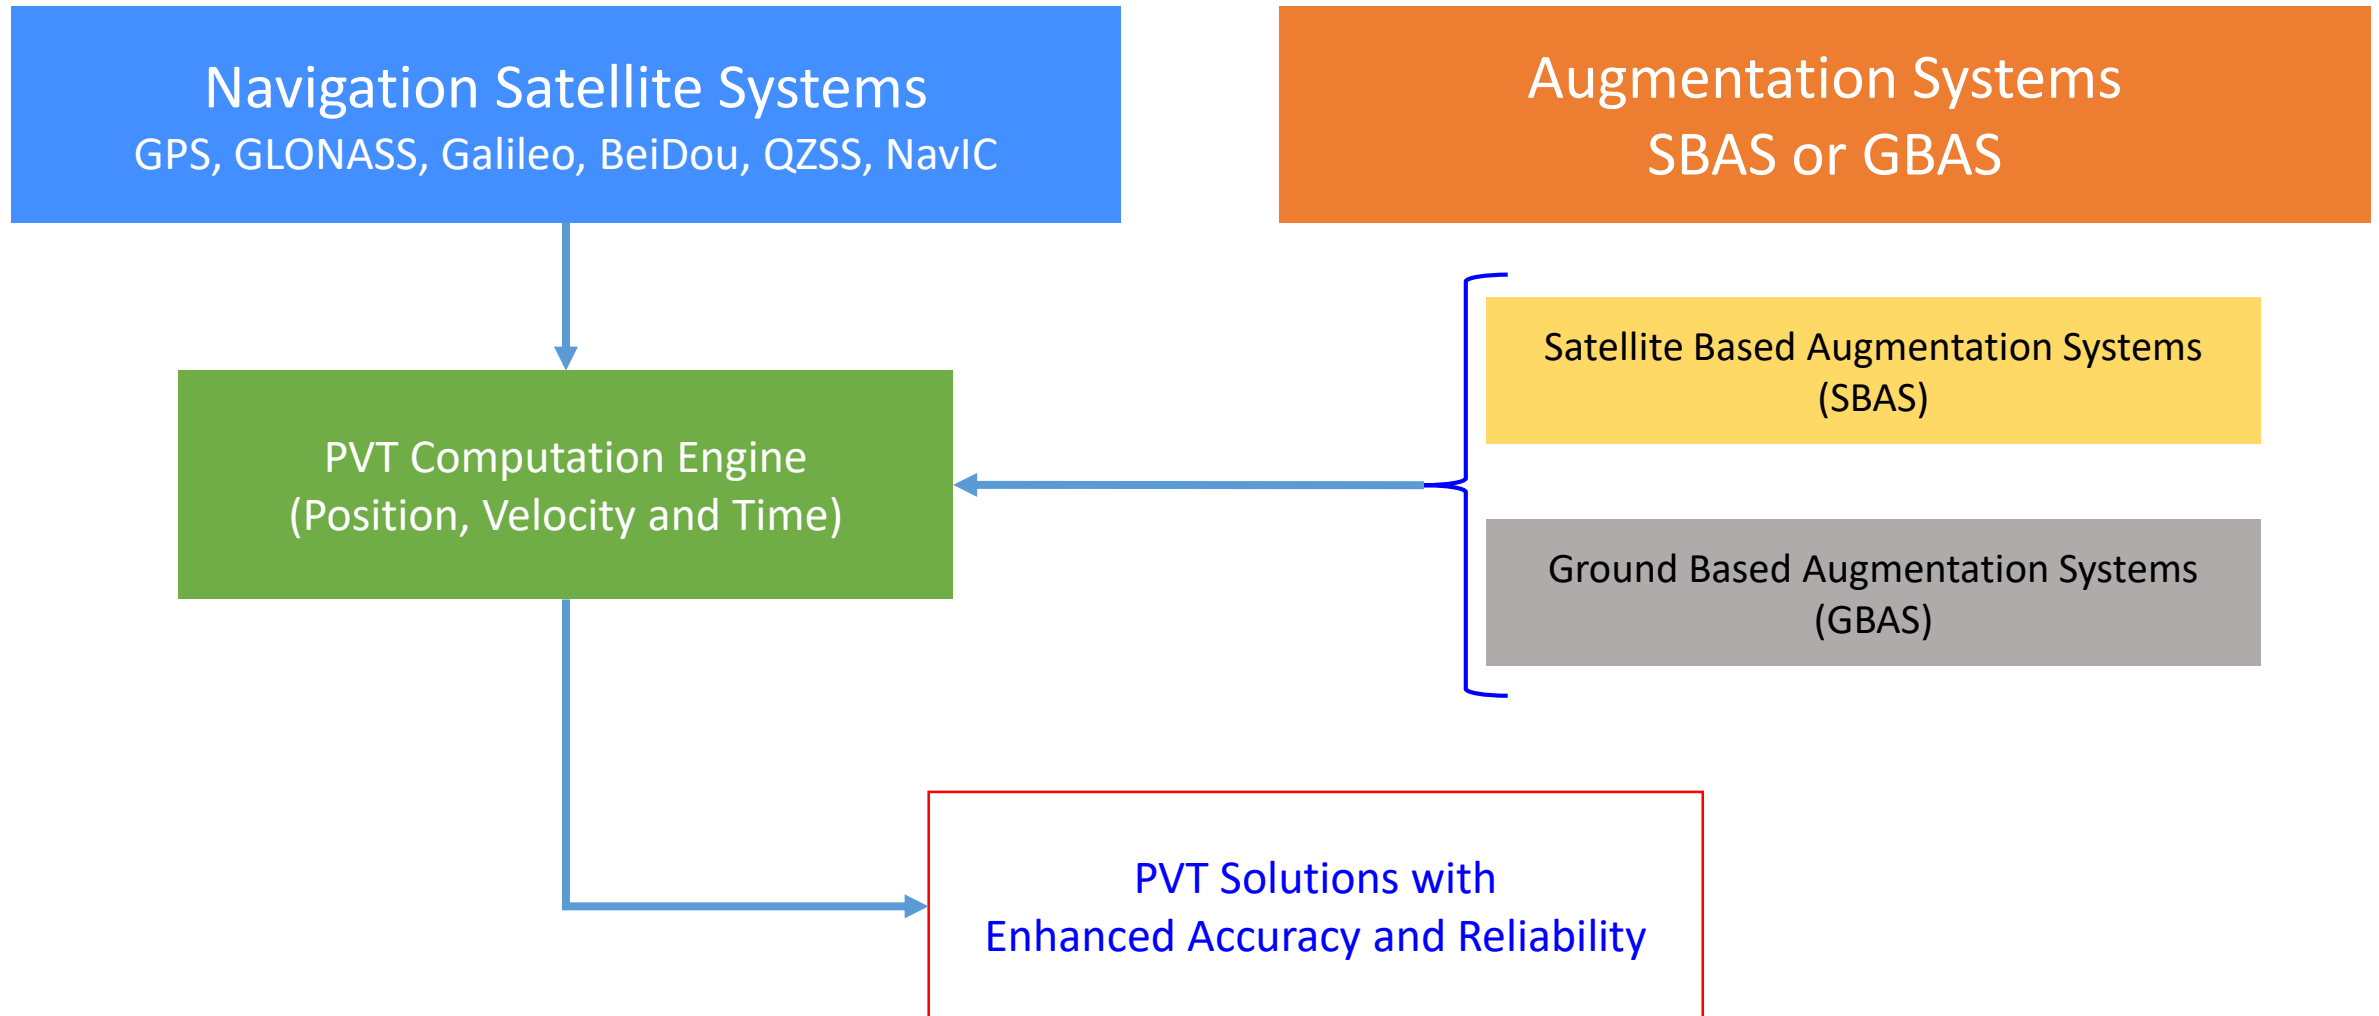

- Global Constellation

- GPS, USA
- GLONASS, Russia
- Galileo, Europe
- BeiDou (COMPASS) / BDS, China

- Regional Constellation

- QZSS, Japan
- NAVIC (IRNSS), India

# Systems Related with Navigation

# Satellite Based Augmentation System (SBAS)

- Satellite Based Augmentation System (SBAS) are used to augment GNSS Data
  - Provide Higher Accuracy and Integrity
  - Correction data for satellite orbit errors, satellite clock errors, atmospheric correction data and satellite health status are broadcasted from satellites
- SBAS Service Providers
  - WAAS, USA (131,133,135,138)
  - MSAS, Japan (129,137)
  - EGNOS, Europe (120,121,123,124,126,136)
  - BDSBAS, China (130,143,144)
  - GAGAN, India (127,128,132)
  - SDCM, Russia (125,140,141)
  - KASS, Korea (134), Also Navigation System
  - AUS-NZ, Australia (122)
  - NSAS, Nigeria, (147)
  - ASAL, Algeria (148)

PRN code numbers are given in the bracket

# GPS L1C/A Signal Structure

- Carrier Signal
  - It defines the frequency of the signal
  - For example:
    - GPS L1 is 1575.42MHz, L2 is 1227.60MHz and L5 is 1176.45MHz
- PRN Code
  - Used to identify satellite ID in CDMA
  - Requires to modulate the data
  - Should have good auto-correlation and cross-correlation properties
- Navigation Data
  - Includes satellite orbit related data (ephemeris data)
  - Includes satellite clock related information (clock errors etc)

# 1. QZSS Overview -Current Services-

## Messaging Services outline

### Satellite Report for Disaster and Crisis Management (DC Report)

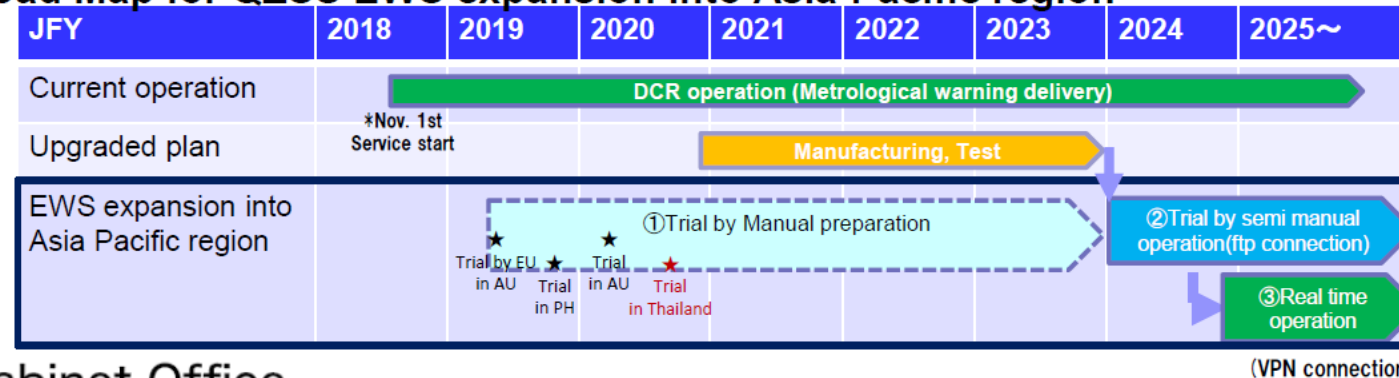

## 2. QZSS 7SV Constellation Design Latest Updates -Early Warning Service (EWS)-

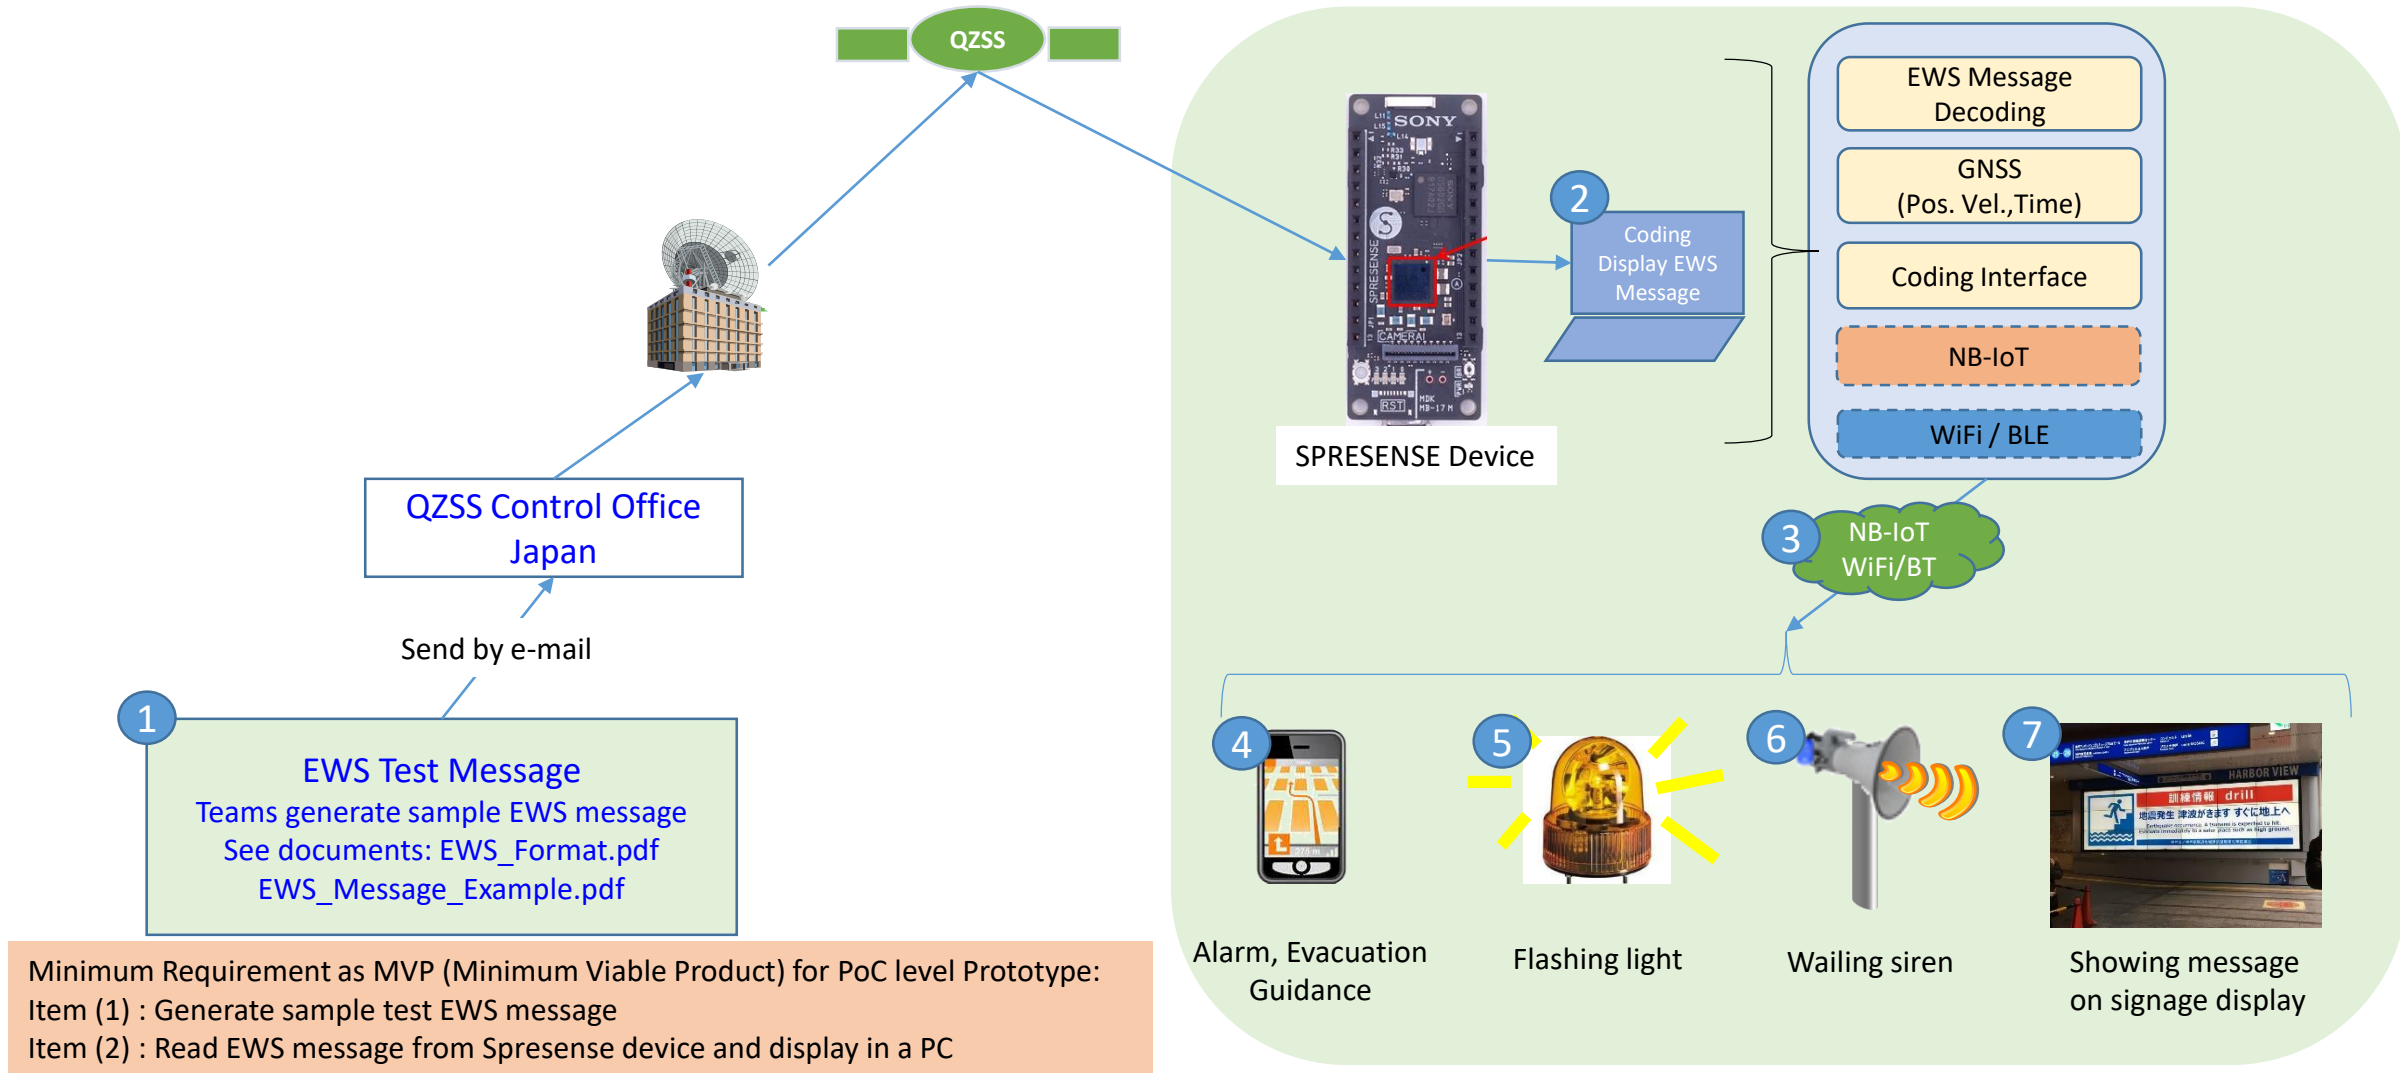

- QZSS L1S signal is sharing 250 bps data stream with SLAS and Disaster and Crisis Report service.
- DCR service is currently providing weather information generated by JMA for Japanese domestic users.
- Common EWS format is being investigated in collaboration with EC.
- QZSS ground segment will be upgraded to support EWS in 2024-2025 and distribute EWS once every 4 seconds through QZS-1 to 4 satellites.

# DC Report message output from a receiver

- DC (Disaster Crisis) Report message output format
  - QZSS uses the term “DC” instead of EWS.
  - All output data shall be interpreted as ASCII characters
  - The beginning of the sentence is message header "\$QZQSM"
  - Satellite ID is 6 LSB of the 8 bit which represented PRN of the L1S
    - PRN 183  $\rightarrow$  0xB7  $\rightarrow$  10110111<sub>b</sub>  $\rightarrow$  110111<sub>b</sub> (Take 6LSBs)  $\rightarrow$  55<sub>10</sub>
    - PRN 183 corresponds to 55
  - 250bit DC Report Message are added two binary data "00" at end of a message to make 252 bit data
  - A carriage return code (CR) and a linefeed code (LF) are added at the end of a sentence
